

## Powders, Liquids, Aerosols and Gels

### What are they?

- Powder - fine dry particles (may also come in clumpy, grain, or compressed forms).
- Liquid - a substance that is a liquid when at room temperature.
- Aerosol - a substance kept in a container under pressure.
- Gel - jelly-like substance.

### Examples include:

- Liquid based food or beverages such as jams, spreads, sauces, soups, oils and soft drink.
- Toiletries or cosmetics such as perfumes, makeup, sunscreen, toothpaste, deodorant, hairspray, shaving foam or hand sanitiser.
- Items such as salt, talcum powder, washing powder and sand.

Australia restricts the quantity of liquids, aerosols, gels and certain powders you can carry on board international flights.

These restrictions apply when:

- leaving Australia
- transiting through Australia to another country
- travelling on the domestic leg of a flight departing from an Australian international terminal

### Some tips...

Some items may not be obvious, such as snow domes or toys and souvenirs with sand, granular material or liquid inside. If you are unsure if an item will pass screening, pack it in your checked baggage.

Empty containers such as flasks or water bottles with a volume greater than 100ml can be carried through the screening point.

At Newcastle Airport you will be able to purchase drinks after you have passed through the screening point.

**Powders, Liquids,  
Aerosols and Gels**  
on international flights

AUSTRALIAN RESTRICTIONS

## How much can I take on board?

- Organic powders (e.g. food, powdered baby formula, coffee, sugar) are not restricted, but must be separated from the rest of your carry-on baggage for X-ray screening.
- Inorganic powders (e.g. salt, sand, talcum powder) must be in containers of 350ml (volume), 350gm (weight) or less. The total must not exceed 350ml, 350gm per person.
- Liquid, aerosol or gel items must be in containers of 100ml (volume), 100gm (weight) or less. These items must be placed in a 20cm x 20cm zip lock bag.
- Only one bag is allowed per passenger, with exceptions for carers who may carry bags for people in their care, including children.
- Empty containers such as flasks or water bottles may be carried through the screening point.

Limits are strictly applied. Security screening officers have the final say about what you can take on board.

Partially filled liquid containers larger than 100ml or 100gm will not be allowed through the security screening point. For example, a 200gm toothpaste tube that is half-full will not be permitted.

Partially filled powder containers larger than 350ml or 350gm will not be allowed through the security screening point. For example, a 500gm container of washing powder that is half-full will not be permitted.

## Exemptions

Reasonable amounts of baby products, prescription and non-prescription medicines (including special dietary products), and medical items required during a flight are exempt. For medicines and medical items, you will need to present these items along with proof (e.g. doctor's letter) at the screening point. Cremated remains are also exempt.

All organic powders are exempt. This includes most powdered foods, coffee, protein powder and powdered baby formula.

## Preparing For Travel

### Before checking in

1. PICK the powder, liquid, aerosol and gel items you need to pack in your carry-on baggage carefully.

Any restricted items over the quantity limits will need to be packed in your checked baggage or left behind.

2. PACK the liquid, aerosol and gel items in a transparent, resealable plastic bag. Four sides of the bag's sealed area must add up to no more than 80cms (e.g. 20x20cm or 15x25cm). The items should fit comfortably in the bag. Only one bag per person is allowed.

Powder items are to be kept separate from the liquid, aerosol and gel bag.

## Preparing For Security Screening

### At the security screening point

3. PRESENT all powder, liquid, aerosol and gel items to security screening staff.

4. SURRENDER any over-sized powder, liquid, aerosol or gel items to screening staff.
